Redefining Energy

NOTICE TO INVESTORS

Trinidad Generation Unlimited (TGU) has initiated a scheduled maintenance exercise and system upgrade on Saturday November 25th, 2023, at 10:00 pm, to end on the morning of Sunday, November 26th 2023 at 9:00am.

This advisory is to give you the assurance that we have put the foreseeable necessary plans and contingencies in place to have a smooth and effective shutdown and upgrade, that we expect will enable a successful reboot to bring our systems back online within the planned period.

We have been planning this upgrade for the past six (6) months, in collaboration with our client, the Trinidad and Tobago Electricity Commission (T&TEC). We are doing this to ensure the optimal operation of all plant equipment, guaranteeing a reliable and uninterrupted power supply to T&TEC.

Given the critical role TGU plays in Trinidad and Tobago's energy industry, this planned upgrade is vital to the continued efficient and reliable operation of our plant and consistent delivery of service to our client.

The focus of the maintenance includes the shutdown of TGU's distributed control system (DCS), a critical component for monitoring and controlling gas and steam cycle operations.

The DCS system upgrade is intended to enhance and maintain the efficient delivery of power from TGU to T&TEC. This enhancement is anticipated to allow TGU to maximise the utilisation of its critical "fuel free" steam cycle, contributing 37.5% (270MW) of output without the need for natural gas as fuel.

We have a communication plan and will ensure that we communicate with all key stakeholders, as necessary during this process. I have shared a copy of our media release and advertorial which was issued on Tuesday, November 21st 2023, and which has appeared in the Trinidad and Tobago daily media on Wednesday, November 22nd 2023.

We plan to communicate with you on the status of this upgrade on Monday, November 27th 2023 and should you have any questions please feel free to reach out to the undersigned.

Regards,

Nigel Chinapoo
CEO (Ag.)

Tuesday 21st November 2023

PRESS RELEASE

TGU POWER PLANT TO UNDERGO SCHEDULED MAINTENANCE AND SYSTEM UPGRADE

The TGU power plant, in collaboration with T&TEC, is set to undergo a scheduled routine maintenance exercise and system upgrade, beginning on **November 25th 2023 at 10:00 p.m. and concluding on the morning of Sunday, November 26th 2023.**

This proactive initiative aims to ensure the optimal operation of all plant equipment, guaranteeing a reliable and uninterrupted power supply to T&TEC. The focus of the maintenance includes the shutdown of TGU's distributed control system (DCS) on November 25th and 26th, a critical component for monitoring and controlling gas and steam cycle operations.

The DCS system upgrade is imperative to enhance and maintain the efficient delivery of power from TGU to T&TEC. This enhancement allows TGU to maximize the utilization of its critical "fuel free" steam cycle, contributing 37.5% (270MW) of output without the need for natural gas as fuel.

During the maintenance period, T&TEC will rely on other contracted Independent Power Producers (IPPs) with a combined capability of over 1,300 MW to ensure continued power supply. TGU remains committed to supporting T&TEC in providing maximum reliable power output at the lowest possible gas consumption cost.

The TGU team is dedicated to efficiently completing the upgrade works, with full operation expected to resume by Sunday 26th November 2023.

TGU appreciates the understanding and cooperation of its stakeholders as they work together to enhance the efficiency and reliability of the power supply.
